

The following claims are presented for examination:

1. (Currently amended) A method comprising:
receiving ~~a command from at~~ a mobile telecommunications terminal a command that reads the value of a datum; and
determining whether to execute said command based on the geo-location of said mobile telecommunications terminal and on said value.
2. (Previously presented) The method of claim 1 wherein the determination whether to execute said command is also based on the identity of the user of said mobile telecommunications terminal.
3. (Previously presented) The method of claim 1 wherein the determination whether to execute said command is also based on the calendrical time at said mobile telecommunications terminal.
4. (Canceled)
5. (Canceled)
6. (Currently amended) The method of claim 1 ~~[[4]]~~ wherein the determination whether to execute said command said-perimeter is also based on an argument of said command.
7. (Canceled)
8. (Currently amended) The method of claim 1 ~~[[4]]~~ ~~wherein said command comprises reading a value associated with a descriptor, and~~ wherein the determination whether to execute said command said-perimeter is also based on the geo-location at which said value is stored.
9. (Currently amended) The method of claim 1 ~~[[4]]~~ ~~wherein said command comprises reading a value associated with a descriptor, and~~ wherein the determination whether to execute said command said-perimeter is also based on said datum descriptor.
- 10-13. (Canceled)

14. (Previously presented) A method comprising:
receiving at a mobile telecommunications terminal a request to access content; and
determining a version of said content to access based on the geo-location of said
mobile telecommunications terminal.

15. (Previously presented) The method of claim 14 wherein the determination of
said version of said content is also based on the identity of the user of said mobile
telecommunications terminal.

16. (Previously presented) The method of claim 14 wherein the determination of
said version of said content is also based on the calendrical time at said mobile
telecommunications terminal.

17. (Previously presented) The method of claim 14 wherein the determination of
said version of said content comprises determining whether said geo-location of said mobile
telecommunications terminal is inside a perimeter.

18. (Original) The method of claim 17 wherein said perimeter is based on the
identity of the user of said mobile telecommunications terminal.

19. (Original) The method of claim 17 wherein said perimeter is based on said
content.

20. (Original) The method of claim 17 wherein said perimeter is based on the geo-
location at which said content is stored.

21. (Original) The method of claim 14 wherein a first version of said content is
associated with a first medium, and wherein a second version of said content is associated
with a second medium.

22. (Original) The method of claim 14 wherein a first version of said content is
associated with a first authorization category, and wherein a second version of said content
is associated with a second authorization category.

23-35. (Canceled)

36. (Previously presented) A method comprising:
transmitting from a mobile telecommunications terminal a request to access remote content; and

receiving at said mobile telecommunications terminal a version of said remote content that is based on the geo-location of said mobile telecommunications terminal.

37. (Previously presented) The method of claim 36 wherein said version of said remote content is also based on the identity of the user of said mobile telecommunications terminal.

38. (Previously presented) The method of claim 36 wherein said version of said remote content is also based on the calendrical time at said mobile telecommunications terminal.

39. (Previously presented) The method of claim 36 wherein said version of said remote content is based on whether said geo-location of said mobile telecommunications terminal is inside a perimeter.

40. (Original) The method of claim 39 wherein said perimeter is based on the identity of the user of said mobile telecommunications terminal.

41. (Original) The method of claim 39 wherein said perimeter is based on said content.

42. (Original) The method of claim 39 wherein said perimeter is based on the geo-location at which said content is stored.

43. (Original) The method of claim 36 wherein a first version of said content is associated with a first medium, and wherein a second version of said content is associated with a second medium.

44. (Original) The method of claim 36 wherein a first version of said content is associated with a first authorization category, and wherein a second version of said content is associated with a second authorization category.

45. (Currently amended) A method comprising:
receiving at a mobile telecommunications terminal a command ~~issued by the user of said mobile telecommunications terminal~~ that reads the value of a datum; and

determining whether to execute said command based on the geo-location of said mobile telecommunications terminal **and on said datum.**

46. (Previously presented) The method of claim 45 wherein the determination whether to execute said command is also based on the identity of the user of said mobile telecommunications terminal.

47. (Previously presented) The method of claim 45 wherein the determination whether to execute said command is also based on the calendrical time at said mobile telecommunications terminal.

48. (Canceled)

49. (Canceled)

50. (Currently amended) The method of claim **45** ~~[[48]]~~ wherein **the determination whether to execute said command** ~~said perimeter~~ is **also** based on an argument of said command.

51. (Canceled)

52. (Currently amended) The method of claim **45** ~~[[48]]~~ ~~wherein said command comprises reading a value associated with a descriptor, and~~ wherein **the determination whether to execute said command** ~~said perimeter~~ is **also** based on the geo-location at which said value is stored.

53-63. (Canceled)

64. (New) A method comprising:
receiving at a mobile telecommunications terminal a command that updates the value of a datum; and
determining whether to execute said command based on the geo-location of said mobile telecommunications terminal and on said value prior to updating.

65. (New) The method of claim 64 wherein the determination whether to execute said command is also based on the identity of the user of said mobile telecommunications terminal.

66. (New) The method of claim 64 wherein the determination whether to execute said command is also based on the calendrical time at said mobile telecommunications terminal.

67. (New) The method of claim 64 wherein the determination whether to execute said command is also based on what said value would be after updating.

68. (New) The method of claim 64 wherein the determination whether to execute said command is also based on an argument of said command.

69. (New) The method of claim 64 wherein the determination whether to execute said command is also based on the geo-location at which said value is stored.

70. (New) The method of claim 64 wherein the determination whether to execute said command is also based on said datum.

71. (New) A method comprising:
receiving at a mobile telecommunications terminal a command that reads the value of a datum; and
determining whether to execute said command based on the geo-location of said mobile telecommunications terminal and on the geo-location at which said value is stored.

72. (New) The method of claim 71 wherein the determination whether to execute said command is also based on the identity of the user of said mobile telecommunications terminal.

73. (New) The method of claim 71 wherein the determination whether to execute said command is also based on the calendrical time at said mobile telecommunications terminal.

75. (New) The method of claim 71 wherein the determination whether to execute said command is also based on an argument of said command.
